WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 600 x 500 mm from 9 mm birch plywood; sand the edges.
Seal both faces and the edges with two coats of varnish:
the rig holds water, and bare plywood swells.
Mark the outline of every part from the base layout picture:
measured from the left and front edges of the plate.
Drill 3 mm pilot holes for the HEPA unit, controller,
dryer socket, jar rack and pump feet.
Stick six rubber feet underneath: four at the corners,
40 mm in, and two at mid-length of the long edges.
Fit: the jacket bottom panel sits on it, flush with the left
edge 46 mm in, glued with foam-safe adhesive.
Check: the plate lies flat on the bench without rocking.

CalRig base plate: making sketch
