WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Laser cut five panels from 6 mm cast acrylic: top and bottom

412 x 312; left and right 312 deep x 300 tall; back 400 x 300.

Cut every hole with the panels (wall holes picture): right

wall Peltier opening 90 x 100, three 12 mm ports, 6 mm drain,

four 4 mm clamp holes; back wall two 12 mm HEPA holes, two

20 mm gland holes; left wall a 16 mm aerosol hole.

Solvent weld: sides and back stand between top and bottom;

the front stays open. Clamp square; leave 24 h.

Weld the four fan spacers to the back wall inside, the drip

tray to the right wall, and the front frame to the front edges.

Inside 400 x 300 x 300 (36 L); outside 412 x 312 x 312.

Check: fill 10 mm of water inside for an hour: no leaks.
