WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut from 3 mm acrylic: a floor 50 x 130, a long side 130 x 11 and two ends 47 x 11.

Weld the sides on top of the floor's edges, leaving the fourth long edge open: that edge welds to the chamber wall.

The tray is 50 deep, 130 long and 14 tall outside.

Fit: weld the open edge to the inside of the right wall, centred under the Peltier opening, floor 127 above the inside floor. Its top is 4 below the inner sink.

The 6 mm drain hole in the wall is 8 above the tray's underside, just clear of the tray floor.

Check: water poured into the tray runs out of the drain hole.

CalRig drip tray: making sketch
