WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Laser cut a 318 x 176 plate from 6 mm acrylic with 8 mm holes on a 24 mm grid (13 x 7, none at the four corners over the legs). Engrave six bay outlines 90 x 70, 12 apart and 12 from the edges. Cut four legs 10 x 10 x 50 and a cable rail 318 x 25 x 12. Weld a leg under each corner, 10 in from both edges, and the rail along the back edge, standing up from the plate. Drill and tap two M4 holes in the rail's back face, on its middle, 6 and 19 up from its lower edge, for the mast. Fit: the legs stand loose on the chamber floor, so the tray lifts out through the door. Plate top 56 above the floor. Check: the tray stands level and does not rock.
